Boreas - Assignment Brief and Deliverables

What was asked

UK utility day-ahead buyer needs:
1. Decision-relevant national wind forecasts for purchase decisions.
2. Quantitative accuracy to size thermal/residual procurement.
Scope: Elexon FUELHH WIND + WINDFOR only; January 2026 delivery.
Stack: React, Python, Docker; deploy sample; docs; public GitHub; demo materials.

What we delivered

[x] React + FastAPI app (Boreas)
[x] Elexon integration with decision-window filter
[x] Metrics: MAE, RMSE, MAPE, bias, lead-time error, P90 band
[x] Docker Compose
[x] README with methodology and AI disclosure
[x] Architecture PDF + assignment brief PDF
[x] Public GitHub repo mqxvn-k7wp
[x] Silent demo MP4 + SPEAKER_SCRIPT.md
[x] SUBMISSION.md paste sheet (no Google form auto-submit)
[ ] Live Vercel URL (morning login if token missing)
[ ] Narrated unlisted YouTube (human morning upload)

Explicit non-goals

No Google form submission, no Heroku, no overnight YouTube publish,
no non-Elexon sources, no months beyond Jan 2026 delivery scope.
